Its a phone, not a FPS game that you need 120 frames every second to feel alive. The OS + hardware is well optimized to offer locked 60FPS, without losing even a single frame. This

I'm sorry, what? If you can't tell the difference between 60hz and 120hz you might want to get your eyes checked. You get used it after some time I guess, but 60hz is clearly choppy.

I am using the Pixel 9A for 2 months.

Do these.

1. Turn off 120hz, it's already too smooth in 60Hz. You won't even feel the difference.
2. Turn off automatic updates on restart. This will save your life. Before you do an update, ask Gemini to loop through Google's issues tracker to check for any issues that are not solved yet. Like the recent one with the bootloop issues.
3. It cannot run LLMs or SLMs. The G4 is not a speedy chip, it's an optimised chip for Android. So cool your ass.

Rest everything is excellent. Native android experience. Camera is similar to iphone 16 pro. Functionalities are already too good.

The best performance of Android will be the one it ships with.

I'm currently using a 9a, I got mine as a birthday gift which is why I'm using it as a secondary phone. But there's a reason why it's my secondary and not my primary, it stinks 🤔

I know you've probably heard this thousands of times, but it's true; pixel phones have awful performance compared to its competitors ❌ Apps lag out after a while. I've experienced some UI glitches too. I had to get this phone replaced once because my first one (the one I bought before my birthday) had a connectivity issue. Speaking about the connectivity, the modem on this phone is absolutely awful. It has a trash Exynos 5300 modem. Although the modem is an improvement compared to the ones used on the Pixel 7 series, my data speeds are still much lower on my Pixel 9a in comparison to my other phones, I used the same SIM for all of them to test the speeds out. The charging is also snail 🐌 slow, it took me 1h 37mins just to charge me phone from 5% to 90%. Lastly, there's this strange popping noise that occurs every once in a while, even if your volume is on mute. For me this popping sound happens when I'm on YouTube or when I'm opening a game. This popping sound is an issue for all Pixel phones in general, but some get this popping sound more than others.

But there are many things that I love about the Pixel 9a. I love the Iris color on mine, there is no camera bump, the bezels aren't that noticeable, if you buy the phone via a carrier there won't be any carrier bloat, you'll be the first to receive new updates, the camera is great (but the zoom is very limited; you can only use up to 8x zoom on photo mode, and 4k 60fps videos can only go up to 5x zoom). The UI is gorgeous, it's very customizable, and the haptics feel great

there was a law made in Europe to try and solve this issue customers face from other manufacturers, but: <https://www.androidauthority.com/motorola-eu-software-updates-loop-hole-3636627/>

Which is best camera phone pixel 9a vs Moto edge 60 pro in india????

In my opinion, pixel 9a is not a "camera phone". It has a good camera, but Moto Edge 60 pro has a tele lens and a better ultrawide lens.

Aight cool. Still pixel phones are way overrated and way overpriced for their specs. Also, stock android is just dull, it lacks a lot of useful features that other android skins have (coming from a person who used stock android for years!)

I have the sand gold color. Using Honor phones has been a breeze very nice experience, with 6 yrs of software support, couldn't be much happier!

Yes I know it's true Samsung and Motorola now have appcloud - ironsource crap and inclusive Aura oobe With shadow past another Crap Spyware in Software. M2 Titan -Risc Vectors architecture it's completely isolated from Tensor G4 and run own microkernel. Pixel no have Crap in Software and if you use a powerful VPN like Proton or mullvad can block Google p Play Amd Google play services and No spy nothing !

RISC-V was developed in 2010 at the University of California, Berkeley as the fifth generation of RISC processors created at the university since 1981.[5] In 2015, development and maintenance of the standard was transferred to RISC-V International, a non-profit organization based in Switzerland[6] with more than 4,500 members as of 2025.

I don't know I like it and Honor 400 Sand Gold looks very good 6 years of Software Update in Europe but more trust have in Pixel

MagicOs is a lot lighter and smoother than OneUI has ever been. I have Honor 400 smart and it has no bloatware no ads. As for security, nothing secure really, you think apple samsung or google don't spy on ya?! And btw, Scamsung also inject Appcloud in their phones along side with other malware, just go google "Ironsourc Samsung"

Honor destroys all of these.

Honor 400 with Qualcomm 7 Gen 3 received Security Patch once from 3 months not monthly and have Skin Magic Os like Samsung One UI . Have a lot of blotware. Nothing compared with Pixel.have M2 Titan security Chip RISC - Vectors. Chinese don't put maximum accent. To Security. The best in Security is Pixel, iPhone and Samsung with Knox. This device is certified
